

Project Brief

Title: *DataOps Assistant — SQL, ML, and Programmatic Prompting with Gemini 1.5 Flash*

Objective

In this project, you will use the Titanic dataset:

- Learn how to use a **Large Language Model (LLM)** (Gemini 1.5 Flash) **programmatically**.
- Use prompts inside Python code to:
 1. Generate SQL queries that help you explore key patterns in the data and interpret SQL queries output
 2. Suggest and implement feature engineering in Pandas.
 3. Recommend ML models and hyperparameters.
 4. Train models and evaluate results.
 5. Generate a final project report automatically.

This will simulate how modern data scientists can integrate LLMs into their workflow.
